PROFILE

I am a web developer that likes to code with the latest front-end technologies and contribute to open source projects in my community. I am experienced in building mobile responsive full-stack applications with the React, Node, Express, and MongoDB stack.

EMPLOYMENT HISTORY

Web Developer, Insured.io

Oct 2019 — Present

- Utilize HTML, CSS, JavaScript, jQuery, and Cold Fusion for the custom development of dashboard/portal websites for insurance quote flows
- Project and task management through Agile methodology and Jira ticket system

Request for Proposal Analyst, e. Republic

Folsom

Mar 2018 — Present

- Analyzed and compiled critical insights of over 5,000 IT related documents
- Maintained a large document database through a graphical user interface

SIDE PROJECTS

Neighborhood Connect v0.1

- [Code for Sacramento project](#) to connect neighborhood leaders to city officials
- Spearheaded the implementation of responsive design and animations from scratch per the UI/UX team's specification
- Worked on a team of 4 front-end developers and in collaboration with UI/UX and back-end teams to create a minimal viable product for demo showcase at Sacramento City Hall

Reel Reviews

- [A full-stack React/Node application](#) to browse, search, and rate movies
- Designed and developed a mobile responsive front-end UI from scratch
- Designed and developed a REST API Node/Express server with CRUD functionality
- Implemented a stateless token based user authentication system

WICit

- [WICit](#) (Special Supplemental Nutrition Program for Women, Infants, and Children) is a work in progress remake of a Code of Sacramento open source project
- Designed and developed a mobile responsive React front-end from scratch
- Utilizes the Google Maps API to display data from [City of Sacramento Open Data](#)

Coins Compare

- [A React application](#) for viewing the top crypto-currencies and their price trends
- Utilizes the Coin Gecko API for crypto-currency data

Fullcourt Flex

- [A full-stack application](#) built with Node, Express, JavaScript/jQuery, HTML5, CSS3
- Utilizes the Google Maps API to display location for local pickup basketball games

ORGANIZATIONS

Co-Host | freeCodeCamp

- Solved and debugged web applications for beginner developers
- Guided beginner developers on web development fundamentals

Code for America, Sacramento Brigade

- Collaborated with developers to leverage technology as a tool to connect citizens with community resources and each other.

EDUCATION

Sociology, University of California Santa Barbara | 2017
