## PROFILE

I am a front end developer focused on intuitive design and functional simplicity. My core skills are HTML, CSS, and JavaScript.

## EMPLOYMENT HISTORY

### Front-End Web Developer, Insured.io                    Sacramento
Oct 2019 — Present

- Utilized HTML, CSS, JavaScript, and ColdFusion to create dashboard for insurance quoting
- Redesigned web-based insurance quoting application
- Streamlined complex insurance business rules to user-friendly UI
- Translated insurance logic to code, creating a more efficient quoting process
- Provided beneficial IT support and debugging
- Agile management of new features and functions using Jira
- Helped bring the web-based insurance application from early development to production
- Collaborated with insurance experts to meet changing requirements in business logic

## SIDE PROJECTS

### Neighborhood Connect v0.1                    Code 4 Sacramento
Jul 2019 — Present

- Code for Sacramento project to connect neighborhood leaders to city officials
- Spearheaded the implementation of responsive design and animations from scratch per the UI/UX team's specification
- Worked on a team of 4 front-end developers and in collaboration with UI/UX and back-end teams to create a minimal viable product for demo showcase at Sacramento City Hall
- In ongoing development

## ORGANIZATIONS

### Co-Host | freeCodeCamp

- Solved and debugged web applications for beginner developers
- Guided beginner developers on web development fundamentals

### Code for America, Sacramento Brigade

- Collaborated with developers to leverage technology as a tool to connect citizens with community resources and each other.

## EDUCATION

### Sociology, University of California Santa Barbara
